Continuation of 5. does NOT place the application in condition for allowance because: Applicant argues that Montgomery does not teach a spout. It is the Examiner's position that Montgomery teaches a spout at lead line 16 in figure 4 to the degree set forth in the claims. This portion of the Montgomery container can direct and discharge liquid in the same manner as the spout of Applicant's invention. Regarding the closure, claim 1 sets forth that the "annular upper portion of the inner surface of the skirt inclined downwardly and outwardly ... to form with the annular sealing flange an upwardly converging annular gap into which the rim of the container is wedged". Elements 22 and 40 comprise the upper portion of the inner surface of the skirt. At 22 the annular upper portion of the inner surface of the skirt extends downwarldy and outwardly and a gap is formed between element 36 and the upper portion of the inner surface of the skirt (comprised of elements 22 and 40. There was no hindsight arrangment since the Montgomery reference was not modified by a secondary reference. The unaltered elements of the Montgomery invention have been described using the terminology of the present application to clearly set forth how Montgomery meets the claims of the present application.
